## Fast Sensor---RI-25 Series

RI-25 Series
Micro dry-reed switch hermetically sealed in a gas-filled glass enve- lope.
Single-pole, single-throw (SPST) type, having normally open contacts, and containing two magnetically actuated reeds.

The switch is of the double-ended type and may be actuated by an electromagnet, a permanent magnet or a combination of both.

The device is intended for use in high load applications in relays or switching devices.

## RI-25 Series Features

-Can handle up to 25 W load
-Contact layers: gold, sputtered ruthenium
-Superior glass-to-metal seal and blade alignment

- Excellent life expectancy and reliability

## General data for all models RI-25

## AT-Customization / Preformed Leads

Besides the standard models,customized products can also be supplied offering the following options:

- Operate and release ranges to customer specification
-Cropped and/or preformed leads

## Coils

All characteristics are measured using the Philips Standard Coil. For definitions of the Philips Standard Coil, refer to "Application Notes" in the Reed Switch Technical \& Application Information Section of this catalog.

## Life expectancy and reliability

The life expectancy data given below are valid for a coil energized at 1.25 times the published maximum operate value for each type in the RI-25 series.

No-load conditions(operating frequency: 100 Hz ) Life expectancy: $\min .3 \times 10^{8}$ operations with a failure rate of less than $0.9 \times 10^{-9}$ with a confidence level of $90 \%$.
End of life criteria:
-Contact resistance $>1 \Omega$ after 2 ms

- Release time $>2 \mathrm{~ms}$ (latching or contact sticking).

Loaded conditions (resistive load: 20 V ; 500 mA ; operating frequency: 125 Hz )

RI-25AAA
Life expectancy: min. $10^{6}$ operations with a failure rate of less than $2.5 \times 10^{-7}$ with a confidence level of $90 \%$. End of life criteria:
$\bullet$ Contact resistance $>2 \Omega$ after 2.5 ms
$\bullet$ Release time $>2.5 \mathrm{~ms}$ (latching or contact sticking).

RI-25AA; RI-25A; RI-25B; RI-25C
Lifeexpectancy:min. $5 \times 10^{7}$ operations with a failure rate of less than $5 \times 10^{-9}$ with a confidence level of $90 \%$. End of life criteria: -Contact resistance $>2 \Omega$ after 2.5 ms

- Release time $>2.5 \mathrm{~ms}$ (latching or contact sticking).

Loaded conditions(resistive load: $50 \mathrm{~V} ; 100 \mathrm{~mA}$; operating frequency: 50 Hz )
Life expectancy:min. $10^{6}$ operations with a failure rate of less than $2 \times 10^{-7}$ with a confidence level of $90 \%$.
End of life criteria:

- Contact resistance $>1 \Omega$ after 5 ms
- Release time $>2 \mathrm{~ms}$ (latching or contact sticking).
- Switching different loads involves different life expect.

Any and reliability data.Further information is availble-able on request.

## Mechanical Data

Contact arrangement is normally open; lead finish is tinned; net mass is approximately 190 mg ; and can be mounted in any position.

## Shock

The switches are tested in accordance with "IEC 68-2-27", test Ea (peak acceleration 150 G ,half sinewave; duration 11 ms ).Such a shock will not cause an open switch (no magnetic field present) to close, nor a switch kept closed by an 80 AT coil to open.

## Vibration

he switches are tested in accordance with "IEC 68-2-6", test Fc (acceleration 10 G ; below cross-over fre- quency 57 to 62 Hz ; amplitude 0.75 mm ; frequency range 10 to 2000 Hz , duration 90 minutes). Such a vibration will not cause an open switch (no magnetic field present) to close, nor a switch kept closed by an 80 AT coil to open.

## Mechanical Strength

he robustness of the terminations is tested in accordance with "IEC 68-2-21", test Ua 1(load 40N)

## Operating and Storage Temperature

Operating ambient temperature; min: $-55^{\circ} \mathrm{C}$; max:
$+125^{\circ} \mathrm{C}$. Storage temperature; min: $-55^{\circ} \mathrm{C}$; max:
$+125^{\circ} \mathrm{C}$. Note: Temperature excursions up to $150^{\circ} \mathrm{C}$ may be permissible. For more information contact your nearest Coto Technology sales office.

## Soldering

The switch can withstand soldering heat in accordance with "IEC 68-2-20", test Tb, method 1B: solder bath at $350 \pm 10^{\circ} \mathrm{C}$ for $3.5 \pm 0.5$ s. Solderability is tested in accordance with "IEC 68-2-20", test Ta, method 3: solder globule temperature $235^{\circ} \mathrm{C}$; ageing $\mathrm{Ib}: 4$ hours steam.

## Welding

The leads can be welded

## Mounting

The leads should not be bent closer than 1 mm to the glass-tometal seals. Stress on the seals should be avoided. Care must be taken to prevent stray magnetic fields from influencing the operating and measuring conditions.
