## Fast Sensor---RI-70 Series

## RI-70 Series

Ultra-miniature dry-reed switch hermetically sealed in a gas-filled glass envelope. Single-pole, single-throw (SPST) type, having normally open contacts, and containing two magnetically actuated reeds.

The switch is of the double-ended type and may be actuated by an electromagnet, a permanent magnet or a combination of both.

The device is intended for use in relays, sensors, pulse counters or similar devices.

## RI-70Series Features

- Ideal for ATE switching
$\bullet 7 \mathrm{~mm}$ glass length
- Contact layers: gold, sputtered ruthenium
- Superior glass-to-metal seal and blade alignment
- Excellent life expectancy and reliability

Dimensions in inches (mm)

## General data for all models RI-70

## AT-Customization / Preformed Leads

Besides the standard models, customized products can also be supplied offering the following options:

- Operate and release ranges to customer specification
-Cropped and/or preformed leads

## Coils

All characteristics are measured using the Philips Standard Coil. For definitions of the Philips Standard Coil, see Reed Switch Technical \& Application Information Section of this catalog.

## Life expectancy and reliability

The life expectancy data given below are valid for a coil energized at 1.25 times the published maximum operate value for each type in the RI-70 series.

No-load conditions (operating frequency: 100 Hz ) Life expectancy: $\min .10^{9}$ operations with a failure rate of less than $2 \times 10^{-10}$ with a confidence level of $90 \%$. End of life criteria:
$\bullet$ Contact resistance $>1 \Omega$ after 2 ms
$\bullet$ Release time $>2 \mathrm{~ms}$ (latching or contact sticking).
Loaded conditions (resistive load: $5 \mathrm{~V} ; 100 \mathrm{~mA}$; operating frequency: 125 Hz )
Life expectancy: min. $2 \times 10^{7}$ operations with a failure rate of less than $10^{-8}$ with a confidence level of $90 \%$. End of life criteria:
$\bullet$ Contact resistance $>1 \Omega$ after 2.5 ms
$\bullet$ Release time $>1 \mathrm{~ms}$ (latching or contact sticking).
Loaded conditions (resistive load: $20 \mathrm{~V} ; 500 \mathrm{~mA}$; operating frequency: 125 Hz )
Life expectancy: $\min .5 \times 10^{6}$ operations with a failure rate of $<0.5$ $\times 10^{7}$ with a confidence level of $90 \%$.

End of life criteria:
$\bullet$ Contact resistance $>2 \Omega$ after 2.5 ms
$\bullet$ Release time $>2.5 \mathrm{~ms}$ (latching or contact sticking). Switching different loads involves different life expect- ancy and reliability data. Further information is avail- able on request.

RI-70

| Operating Characteristics |  |  |  |
| :---: | :---: | :---: | :---: |
| Operate Rangs |  | AT | 7-21 |
| Release Range |  | AT | 3-16 |
| Operate Time-including bounce (typ.) | (energization) | ms | 0.15 (25AT) |
| Bounce Time (typ) | (energization) | ms | $0.035(25 \mathrm{AT})$ |
| Release Time (mas) | (energization) | us | $0.035(25 \mathrm{AT})$ |
| Resonant Frequency (typ.) |  | Hz | 17900 |
| Electrical Characteristics |  |  |  |
| Switch Power (max) |  | W | 10 |
| Switch Voltage DC (max) |  | V | 170 |
| Switch Voltage AC, RMS value (max) |  | V | 120 |
| Switch Current DC (max) |  | mA | 500 |
| Switch CurrentAC, RMS value (max) |  | mA | 500 |
| Carry Current DC (max) |  | A | 400 |
| Breakdown Voltage (min) |  | V | 210 |
| Contact Resistance (initial max ) | (energization) | $\mathrm{m} \Omega$ | 150(20AT) |
| Contact Resistance (intial typ.) | (energization) | $\mathrm{m} \Omega$ | 120(20AT) |
| Contact Capacitance (max) | without test coil | pF | 0.35 |
| Insulation Resistance (min) | RH $\leq 45 \%$ | $\mathrm{M} \Omega$ | $10^{6}$ |

## Mechanical Data

Contact arrangement is normally open; lead finish is tinned; net mass is approximately 70 mg ; and can be mounted in any position.

## Shock

The switches are tested in accordance with "IEC 68-2-
$27^{\prime \prime}$, test Ea (peak acceleration 100 G , half sinewave; duration 11 ms ). Such a shock will not cause an open switch (no magnetic field present) to close.

## Vibration

The switches are tested in accordance with "IEC 68-2$26^{\prime \prime}$, test Fc (acceleration 10G; below cross-over fre- quency 57 to 62 Hz ; amplitude 0.75 mm ; frequency range 10 to 2000 Hz ; duration 90 minutes.) Such a vibration will not cause an open switch (no magnetic field present) to close, nor a switch kept closed by an
80 AT coil to open.

## Mechanical Strength

The robustness of the terminations is tested in accor- dance with "IEC 68-2-21", test Ua ( $\operatorname{load} 10 \mathrm{~N}$ ).

Operating and Storage Temperature
Operating ambient temperature; $\min :-55^{\circ} \mathrm{C}$;
max: ${ }^{+} 125^{\circ} \mathrm{C}$. Storage temperature; min: $-55^{\circ} \mathrm{C}$; max:
${ }^{+} 125^{\circ} \mathrm{C}$. Note: Temperature excursions up to $150^{\circ} \mathrm{C}$ may be permissible.For more information contact your nearest Coto
Technology sales office.

## Soldering

The switch can withstand soldering heat in accordance with "IEC $68-2-20^{\prime \prime}$, test Tb , method 1 B : solder bath at $350 \pm 10^{\circ} \mathrm{C}$ for 3.5 $\pm 0.5 \mathrm{~s}$. Solderability is tested in accordance with "IEC 68-2-20" testTa, method 3: solder globule temperature $235^{\circ} \mathrm{C}$; ageing $1 \mathrm{~b}: 4$ hours steam.

## Welding

The leads can be welded.

## Mounting

The leads should not be bent closer than 1 mm to the glass-to-metal seals.Stress on the seals should be avoided. Care must be taken to prevent stray magnetic fields from influencing the operating and measuring conditions.
